

Cal. 4205A

Characteristics

Casing diameter : ϕ 17.2 mm
 Maximum height : 5.5 mm
 Vibrations per hour : 21,600
 Automatic and auxiliary hand winding with sweep second
 Calendar (date)
 Instant date change
 "Diashock" Shock Resistant Device

Catalog No.

Remarks :

Setting lever

☆383 420 } There are two types of setting levers. Select the suitable setting lever by referring to
 ☆383 421 } the shapes in the photograph.
 If the combination of the setting lever and case is unknown, check the case number and refer to "SEIKO Casing Parts Catalogue" to choose an appropriate setting lever.

Date dial

☆801 423 (Black figures on white background) } Used when both the crown and the calendar frame
 ☆801 424 (White figures on black background) } are located at 3 o'clock position.
 ☆801 425 (Black figures on white background) } Used when the crown are located at 3 o'clock position
 ☆801 426 (White figures on black background) } and the calendar frame at 6 o'clock position.
 If any other type of date dial is required, specify ① Cal. No. ② Jewels ③ The crown position
 ④ The calendar frame position and ⑤ Dial No.

Date dial guard

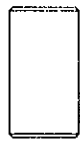

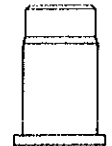

☆808 421 The date dial guard designated by the same parts number may have different types of shape, but they can be used in common.

Holding ring for dial

☆884 420 } The type of holding ring for dial is determined based on design of cases and dials.
 ☆884 421 } If the shape of holding ring for dial is different from the photograph, check the case
 ☆884 422 } number and refer to "SEIKO Casing Parts Catalogue" to choose a corresponding
 ☆884 423 } holding ring for dial.

Tube for barrel & train-wheel bridge screw, Tube for balance cock screw, Tube for rocking seat for idle wheel, Tube for center wheel bridge screw (A), Tube for pallet cock screw (B).

There are two different types as specified below.
Combination :

Type	Tube for barrel & train-wheel bridge screw Tube for balance cock screw Tube for rocking seat for idle wheel	Tube for center wheel bridge screw (A) Tube for pallet cock screw (B)
a	 ☆017 253	 ☆017 254
b	 ☆017 631	 ☆017 633

4205A 150 m Diver's Watch

1) SPECIFICATIONS

Outside diameter ϕ 17.5mm
 Casing diameter ϕ 17.2mm
 Height 5.5mm
 Vibrations 21,600 times/hour
 Automatic winding (with auxiliary hand winding)
 Calendar mechanism (instant date setting)

2) FEATURES

- This watch is so designed as to function as a Diver's watch that has a high water resistant quality.

3) DISASSEMBLING AND REASSEMBLING

Refer to the TECHNICAL GUIDE Cal. 4206A for disassembling and reassembling of movement.

Disassembling, reassembling and lubricating of the case

• Lubricating

Types of oil
 Silicone grease 500,000 c.s.

Oil quantity
 Extremely small quantity
 Normal quantity

<Disassembling procedures>

<Reassembling procedures>

Be sure to take special care with diver's watches and follow the notes below.

- Repair the watch in a room free of dust and lint, and with low humidity.
- Be sure to check that the hands don't rub against the dial or glass or each other, but move smoothly.
- Be sure to check if there are any glass defects or loosened screw.
- After repair, conduct the water resistance test with a water resistance tester (testing capacity, 0-50 Atm.)

Remarks on disassembling the glass portion. (Do not disassemble except when it is being replaced.)

⑧ Rotating ring

- Rotate the rotating ring to align its opening notch with that of the middle (6 o'clock position).
- Put the case opener into the opening notch and pry it up slowly.

⑪ Glass

- Put the case opener into the opening notch positioned at the 6 o'clock side of the middle and pry up the bezel to remove it. After that, push the edge of the glass from the inside of the middle with a sharpened soft stick.
- As the back surface of the glass is specially coated, be careful not to scratch it with the soft stick.
- If there is any stain on the back surface of the glass, clean it by blowerbrush and never wipe it off with a cloth.

Remarks on reassembling the glass portion

Dry the parts completely and reassemble the watch in a room free of dust and lint, and with low humidity

⑫ Glass gasket

Check for dust and lint on the setting position of the glass, and set as shown in the figure at right.

Note: Do not lubricate the glass gasket.

④ Glass

- After replacing the glass, be sure to check if it is set horizontally. And also check to see if the glass gasket is placed in position correctly.

Note: Do not touch the inside of the glass as it is specially treated.

When setting the glass, hold the outside periphery with a fingertip on finger.

- In case resetting of the glass is needed, remove the glass again by pushing it with a stick as explained above.

⑤ Bezel

⑦ Rotating ring

When setting the bezel or rotating ring in place, use a proper size supporting disk and an inserting disk.

⑨ Stem with crown

After lubricating the crown gaskets indicated in the illustration, set the stem with crown to middle slowly so that the crown gasket is not damaged.

PROCEDURES FOR CHECKING AND ADJUSTMENT

The following instruments are necessary to perform repairs.

1. Microscope
2. Timegrapher
3. Water resistance tester (testing capacity, 0-50 Atm.)
